

Laughing Maniacally Through the Dark Delirium of Polar Winter Or Two

In the remote, frozen landscapes of the Arctic, where the darkness of winter envelops the land for months on end, a peculiar phenomenon emerges: the polar winter delirium.

This psychological state, also known as "Ice Madness," manifests itself in a variety of ways, from hallucinations and paranoia to laughter and euphoria. While the exact cause of polar winter delirium remains unknown, it's believed to be triggered by the extreme isolation, sensory deprivation, and disruption of circadian rhythms experienced during the long winter months.
